

Introducing SUPA8 Co

HIGH QUALITY

ADVANCED TECHNOLOGY

TALK

TRIGGER PANIC

Monitored dialler

SUPA8 series of control panels have a digital dialler built-in which allows alarm messages to be sent to either a monitoring company or a friend's or relative's telephone.

If you forget to turn the system on when you leave the premises, no problem! Just switch it on using the nearest telephone - the control panels can be operated remotely from any telephone.

Good looks and style!

SUPA8 grew from the idea that a security system does not have to look "industrial" to do its job properly. The clean, stylish lines are at home in just about any decor and the neutral colour helps the keypad to blend in, not stand out.

Of course, good looks have as much to do with function as form. The keypad has large, easy-to-read, soft-touch keys; a hinged door that hides everything out of the way of inquisitive fingers; and a set of simple, no-nonsense status display lights.

Quality & reliability

SUPA8 series incorporate the best of Australian know-how and ingenuity - the quality is built-in, not added on.

The control panels have been designed with a very simple purpose in mind - to detect alarm and report them. The control panels are not stripped down versions of more expensive systems, (although there are more expensive systems on the market without the capabilities of SUPA8).

The real test of reliability is when things are at its darkness - when the power goes off. Even then, the SUPA8 will remain fully functional, thanks to a backup rechargeable battery power supply.

The keypad modules are stylish enough for any decor without being obtrusive, and the neutral colour blends easily into the background.

HOME AUTOMATION

- * **SUPA Access**
- Stand alone device for door access

TALK AND LISTEN CAPABILITY

- * **Home Automation**
- Remotely activate 2 electrical devices of your choice

- * **GSM Cellular Transmission**
- In the event of phone line cut, the control panel switches to GSM Module for alarm report transmission

- * **Voice Module**
- Zone Alarm Reporting Alarm events in voice message
- 8 Home Automation Output Activate 8 electrical appliances of your choice with voice confirmation
- Personalised Voice Message Can be changed to your preferred language

- * **Supamon**
- Control 2 electrical devices
- Able to communicate remotely from a telephone with "Talk and Listen" capability

* Optional items

Features

Control Panel

- Sixteen user codes
- Supplied in non-flammable cabinet
- Home & Away modes of arming
- Fully programmable zone types
- Up to five keypads per control panel
- Panic, Duress, Test and Quick-arm codes
- Arm / Disarm remotely using any telephone
